Skills Tracker — User Guide

March 4, 2026

Introduction

The Skills Tracker is an internal tool built around one idea: **visible skills are usable skills**. Individuals get a clear view of their own skills and progression over time. Management gets a company-wide view of collective expertise, skill gaps, training needs, and where knowledge is concentrated or at risk.

The Two Apps

The tool is split into two separate web apps to keep personal data away from those who should not see it:

App	Launcher	Who uses it
Employee app	`run_employee_app.cmd`	All staff
Management app	`run_management_app.cmd`	HR / managers only

Each launcher opens the relevant Streamlit interface in a browser window automatically. If the browser does not open, use the URL shown in the command window.

Ensure that `prod_skills.db` is shown in the database caption beneath the page title before entering any data.

Employee App — What You Can Do

Home Enter your company email address, first name, and last name, then click **Continue**. This registers your identity and must be done before using any other tab.

My Skills View your own current skill profile as a table (skill, theoretical level, practical level, interest).

My Progression Select a skill from the dropdown to see a line chart of how your self-assessed levels have changed over time across three dimensions: Theoretical, Practical, and Interest.

Add / Update Skills Log a new skill or update ratings for an existing one.

1. Select a **Field of Use** from the dropdown — this is the area or context in which you apply the skill (e.g. Data Engineering, Reporting). Choose **+ Add new...** if yours is not listed.
2. Select the **Skill** from the dropdown, or choose **+ Add new...** to add one.
3. Adjust the four sliders:
   - *Theoretical knowledge* — how well you understand the underlying concepts (1–5).
   - *Practical experience* — how regularly you apply the skill day-to-day (1–5).
   - *Interest / motivation* — how keen you are to develop this skill further (1–5).
   - *Proficiency in [field]* — your proficiency applying this skill specifically within the chosen field (1–5).
4. Click **Save**.

All changes are logged with a timestamp so your progression is preserved.

Management App — What You Can Do

Management View every person's self-assessed values in a filterable table. Use the *Filter by skill* and *Filter by person* dropdowns to drill down.

Analytics Company-wide aggregated charts and skill-gap analysis, filterable by field of use.

- **Skill Overview table** — average theoretical, practical, and interest levels per skill, plus two gap columns: knowledge gap (Theoretical − Practical) and motivation gap (Interest − Practical).
- **Grouped bar chart** — average levels by dimension (Theoretical / Practical / Interest) for each skill.
- **Knowledge Gap bar chart** — ranked view of where theoretical understanding outpaces practical ability.
- **Gap snapshot tables** — top knowledge gaps, top motivation gaps, and lowest practical capability.
- **Download reports** — export the summary table as `.csv` or `.xlsx`.

Admin Enter an email address and, optionally, a skill name, then click **Delete**. Leaving the skill field blank removes *all* skills for that person. Deletions are permanent and cannot be undone.

Caution

- The shared database (`prod_skills.db`) is stored on the shared network folder and is used by *all* colleagues simultaneously. Be careful when making changes.
- Do **not** delete, rename, or move `prod_skills.db`. It contains all user data.
- Deleting skills via the Admin tab is **permanent and cannot be undone**.

Important Guidelines

- Do not edit the database directly with external tools — this risks data corruption or inconsistencies.
- Close the command-prompt window when you have finished to shut down the local server.
- Do not run multiple instances of the same app on the same machine at the same time.
- Direct any issues or questions to your designated system administrator.
