Skills Tracker — User Guide

March 10, 2026

What is this?

The Skills Tracker lets you self-assess your skills across three dimensions — theoretical knowledge, practical experience, and interest in developing further — and tracks how those ratings change over time. Management can see a company-wide picture of collective expertise, identify gaps, and plan training.

There is **nothing to install**. The tool runs on a central server; you open it in any web browser.

How to access it

The tool is split into two separate web apps so that personal data is only visible to those who need it. Your system administrator will give you the URL for your role.

Who you are	Which app	Default URL
All staff	Employee app	`http://<server>:8501`
HR / managers	Management app	`http://<server>:8502`

Before entering any data, confirm that **`prod_skills.db`** is shown in the database caption beneath the page title.

Employee app

First time only — register

Go to the **Home** tab, enter your company email address, first name, and last name, then click **Continue**. This registers your identity and must be done before using any other tab.

Viewing your skills

My Skills Your current skill profile as a table: skill, theoretical level, practical level, and interest.

My Progression Select a skill from the dropdown to see a line chart of how your ratings have changed over time across all three dimensions.

Logging or updating a skill

Go to the **Add / Update Skills** tab:

1. Select a **Field of Use** — the area or context in which you apply the skill (e.g. Data Engineering, Reporting). Choose **+ Add new...** if yours is not listed.
2. Select the **Skill**, or choose **+ Add new...** to add one.
3. Adjust the four sliders:

- *Theoretical knowledge* — how well you understand the underlying concepts (1–5).
- *Practical experience* — how regularly you apply the skill day-to-day (1–5).
- *Interest / motivation* — how keen you are to develop this skill further (1–5).
- *Proficiency in [field]* — your proficiency applying this skill within the chosen field (1–5).

4. Click **Save**.

Every save is logged with a timestamp, so your full progression history is preserved.

Management app

Management Every person's self-assessed values in a filterable table. Use the *Filter by skill* and *Filter by person* dropdowns to drill down.

Analytics Company-wide aggregated charts and skill-gap analysis, filterable by field of use.

- **Skill Overview table** — average theoretical, practical, and interest levels per skill, plus a knowledge gap column (Theoretical − Practical) and a motivation gap column (Interest − Practical).
- **Grouped bar chart** — average levels by dimension for each skill.
- **Knowledge Gap bar chart** — ranked view of where theoretical understanding outpaces practical ability.
- **Gap snapshot tables** — top knowledge gaps, top motivation gaps, and lowest practical capability.
- **Download reports** — export the summary table as `.csv` or `.xlsx`.

Admin Enter an email address and, optionally, a skill name, then click **Delete**. Leaving the skill field blank removes *all* skills for that person. **Deletions are permanent and cannot be undone.**

Important notes

- All colleagues share a single database on the server. Changes made by one person are immediately visible to others.
- Do not attempt to access, copy, or edit the database file directly — this risks data corruption.
- Deletions via the Admin tab are **permanent and cannot be undone**.
- If the app is unavailable or behaving unexpectedly, contact your system administrator. Do not attempt to restart or reinstall anything yourself.
